Plus
Technology*

Communication Station

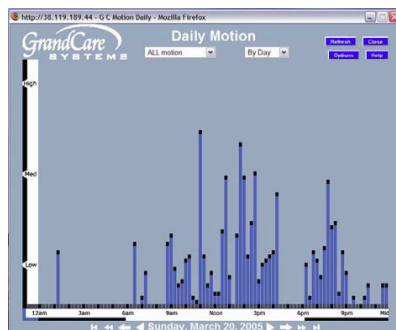

Family, friends and other caregivers can send pictures, messages, reminders, calendar appointments, audio clips and more to a Trillium touch screen or through a television input. The loved one receives these easily—no computer experience necessary.

Caregivers can use the GrandCare calendar and notes to stay in touch with each other and avoid scheduling conflicts.

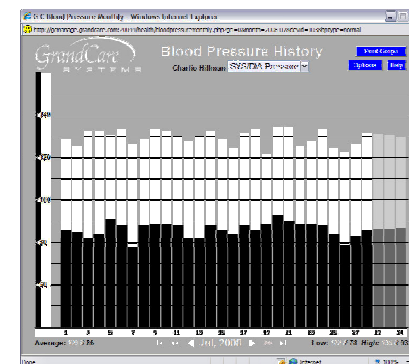

Wellness and Safety

Motion Rules

- IF No motion for 24 hours at ALL DETECTORS THEN contact Call List Daytime
- IF Wandering motion detected from 10:00pm-6:00am THEN send email to ALL Caregivers
- IF Excessive motion from midnight-5:00am for more than 30 minutes at Master Bathroom THEN send email to ALL Caregivers
- IF Any motion from 11:00pm-6:00am at Gaytha's bedside THEN turn on Bathroom hall light (Master bathroom)
- IF No motion from 6:00am-9:00am at Pill drawer THEN send email to cejh@hscinc.com
- IF No motion from 6:00am-noon at Refrigerator THEN send email to ALL Caregivers

Caregivers & Family can log into the GrandCare Website from anywhere in the world to ensure all is well in the loved one's home. Rules can also be set up to perform certain actions if conditions are met. For example, a caregiver may want to be notified if medications are not accessed or if blood pressure exceeds the norm.

A Small GC Como Box is placed in the loved one's home and communicates with various wireless, discreet sensors. GrandCare can help monitor daily activities such as medication access, door openings, temperature, lights, fridge use, and button pushes. The wellness feature tracks blood pressure, pulse, weight and oxygen level in the blood using wireless devices.

Lighting can be controlled, such as a light going on if motion is detected getting out of bed in the night. An automatic lighting schedule can be set up for the loved one. Climate can be monitored remotely.
