GrandCare

An Advanced Monitoring System For
Professional In-Home Caregivers
And Long-Term Care Facilities

Benefits For The Caregiver

GrandCare provides information to make the caregiver more effective. While the system performs the tedious tasks, caregivers can be devoted to hands-on care.

- Keep clients connected to the family by sending pictures, messages and emails.
- Gather more information for wellness assessment to help in care decisions.
- Share peace of mind between clients and their families, by knowing all is well.
- Discreetly monitor activity through wireless sensors.
- Remind clients of important events like birthdays and anniversaries, or even when it's time to take medications.
- Coordinate schedules with staff.
- Exchange notes between staff and family.
- Improve your client's health by better management of chronic conditions.
- Provide increased revenue for your business or organization.

Benefits For The Care Facility

GrandCare provides a cost-effective management solution to monitor the activity and wellness of seniors without compromising dignity.

Additional benefits for the care facility:

- Provide improved safety and security.
- Decrease operating costs while maintaining quality service.
- Monitor door openings, blood pressure, weight, medications, wake-ups, etc.
- Waste less time on unnecessary work.

- Monitor several clients and receive alerts if somebody needs help.
- Perform tedious tasks automatically.
- Customize the system to fit the needs of each client.
- Easily communicate with doctors, family and friends.

How The GrandCare System Works

GrandCare consists of a touchscreen unit placed in the loved-one's home. The system provides access to news, weather, pictures, email, reminders and more on the touchscreen monitor. The resident can also play games, search the Internet, listen to music and other interactive activities.

Meanwhile, a wide range of wireless sensors monitor activities of daily living and wellness.

Family and care partners can go online and assess the wellness and safety of the resident. The system can be instructed to send an email, text message or phone call to the caregivers if something is amiss.

- The GrandCare system is a touchscreen monitor connected to a full-time Internet Connection.
- The GrandCare sensors are placed around the residence and report sensor and wellness activity to the system.
- Family and caregivers can view and monitor the data online.
- It is easy to install with little or no new wires!
